

Please keep net neutrality. The importance of the public information and overall expansion of the internet into everyday work, relaxation & need to know information is critical all. Although I reside in far NW Travis County - there is NO high speed internet service available to our neighbor hood. At&T (formerly Southwestern Bell) keep promising even DSL 20 years ago, we are still waiting for that).

Without net neutrality the internet becomes a rich vs. poor access. We already have enough disparity between classes in the US. ISP providers do not need to be throttling and skimming speed off of individuals to enhance speed for large corporations.

Internet for All - High Speed for Everyone All The Time.

Debbie Cullum
